

## **Forklift Certification Schools Nanaimo**

Forklift Certification Schools Nanaimo - In North America, forklift certification is mandatory, making forklift training programs important for both the company and their workers working as operators of forklifts. Forklift training focuses on health and safety issues involved in using forklifts. Safety issues affect both the forklift driver and employees and other people who are in close proximity to the forklift. Businesses could be subject to penalties if they are caught with operators who are un-certified during a check up. There are many compelling reasons why businesses should comply with forklift standards.

Before the worker or trainee is certified to operate a forklift, the majority of federal, state, and provincial regulations would need the employee go through an evaluation of the skills necessary for forklift safety. There are numerous forklift certification schools offering courses for employees and there are also schools that offer on line forklift training. However, employers should know that forklift certification training is not "just a test". Proper forklift training should contain various areas of study, including theory and hands-on practice. Regulations do not require employers to have an outside organization to certify operators of forklifts.

The suggested curriculum for a quality forklift certification service consists of both an onsite component and classroom training. Classroom training typically features informative sessions with power point presentations, videos, discussions and models. Students usually must write a test to check for subject matter comprehension. Certificates of completion are issued upon successful completion of the class.

The use of the equipment evaluation requires the trainee to understand the job site dangers, pre-operational machine inspection, operational instruction and a pass/fail operational test.

The following subject areas will usually be included in the training: Understanding regulations and legislations; Controls & Instrumentation; Steering and Maneuvering; Engine maintenance and Operation; Fork and Attachment Restrictions, Visibility; Stability, Rated Capacities, Maintenance & Inspection; Refueling; Load Manipulation; Pedestrians, and Dangerous Places & Rough Terrain Operation. Moreover, there are training courses available for workers who are transitioning to new job positions.
